## 1.0 GENERAL COMMENTS

### 1.1 Warnings

The aim of HCX97-9 pump manual is to provide you with all the necessary information for a proper installation and maintenance in order to give you optimum results whilst in operation.

For this reason it is really important reading with attention the instructions given below since they furnish all the indications necessary for the sureness of the installation, use and maintenance

- ◆ This manual has to be preserved with care to be consulted in whatever occasion.
- ◆ At the moment of the receipt you have to check the integrity of the panel and of all its components, in case of anomalies consult skilled staff before making interventions.
- ◆ Before the installation of the pump check that all the data on the pump's label correspond to those of the electrical plant.
- ◆ Do not operate with bare/naked hands or feet
- ◆ Do not leave the equipment exposed to the action of the atmospheric agents.
- ◆ Avoid splashing water
- ◆ The equipment has to be operated from skilled person.
- ◆ In case of improper functioning of the panel switch off and contact our technical assistance for any necessary repairs.
- ◆ For a correct functioning it is necessary to use original spare parts and original accessories. The producer declines whatever responsibility in reference with break down due to tampering or the use of not original spare parts and accessories.
- ◆ The electrical plant has to be in conformity with the rules of the country where it is realised.
- ◆ The room temperature of utilisation can't over take 45° C

### 1.2 Design standard

Our pumps are built according to the actual general directives endowed with CE mark in conformity with the following European directives:

- n° 2014/30/CE "Electromagnetic compatibility – ECM"
- n° 2014/35/CE "DBT Low Voltage Directive" e s.m.i.
- n° 2011/65/UE , 2012/19/UE "direttive RoHs e WEEE" e s.m.i.

**Granted this we think that in order to obtain an high trustworthiness and a lasting functioning of the pump it is necessary to follow with attention our manual particularly in reference with the maintenance!**

**The Producer declines all responsibility in reference with whatever intervention on the equipment from not skilled personnel!**

## 2.0 TECHNICAL CHARACTERISTICS

ENGLISH

### 2.1 General rules

Install the pump:

- ◆ On an horizontal reinforcement (ex: stoking tank) or on the pump shelf (optional) so that the pump head stays always in vertical position +/-15°.
- ◆ Far from an hot source in dry places at maximum temperature of 45°C and minimum 0°C.
- ◆ In a ventilated place and easily accessible by an operator for periodical maintenance.
- ◆ At a suitable height above the chemical up to a maximum height of 1.5 meters. If for exigency of the plant it's necessary to install the pump under the level of the chemical, you need to use an injection valve or an anti siphon valve.
- ◆ Do not install the pump over the tank in presence of liquids that emanate fumes unless it is hermetically closed.

### 2.2 Standard accessories supplied

- ◆ 1 Foot valve / Strainer.
- ◆ 1 Injection fitting / pressure loading valve.
- ◆ 2 meters opaque PE delivery tubing.
- ◆ 2 meters PVC clear suction tubing.
- ◆ 2 meters PVC clear priming tubing

### 2.3 Electrical characteristics

Power supply: 230 VAC 50/60 HZ

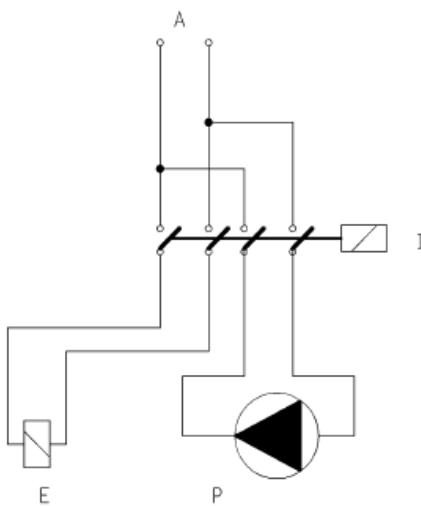

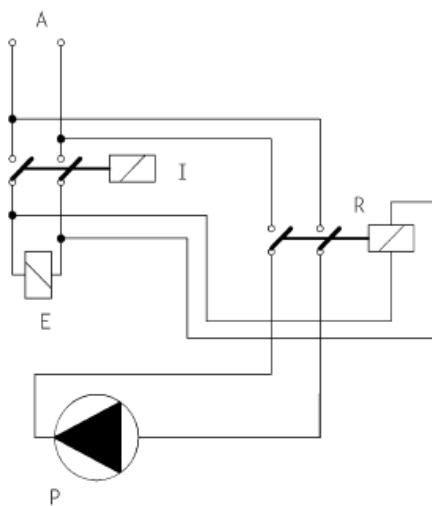

### 2.4 Electric connection

**CAUTION !!!!**

Verify that the earth system is perfectly functional and complies with the applicable regulations. Ensure the unit is connected to a circuit protected by a highly sensitive (0.03A) RCCB circuit breaker. If unsure please consult a competent electrician. Verify that the rated values of the pump are compatible with those of the mains. Never install the pump directly in parallel with inductive loads (e.g. motors/solenoid valves) if necessary, use an isolating relay.

There are 2 protection devices inside the pump: a varistor and a fuse.

P- Metering Pump  
R- Relay  
I-Switcher or multi-pole security device  
E- Motor or generally inductive charge  
A- Supply voltage

## ENGLISH

### 2.5 Hydraulic connection

After the exact installation of the pump (see generalities), proceed with the connection.

**Suction:** connect the suction tube (PVC soft cristal) to the foot filter that is supplied and put it in the hose clamp, lock the tube closing the nut. If it utilises a level probe, this one has to be connected to the filter through the support that is supplied. Put the foot filter into the liquid suction lift tank. Connect the other extremity to the suction of the pump (lower part of the pump head), unscrew the nut from the nipple, take off the rubber white disk situated on the tube connection. Let pass the tube through the nut and the adaptor for the 4x6 tube with a simultaneous action of pressing and rotating, put the tube on the nipple conical connection (hose clamp) till the end; lock up everything by closing the nuts well. See fig. 9

**Delivery:** connect the pump to the plant always through the injection valve (1/2"Gm) that is supplied with the installation Kit. Fit a Gf 1/2" nipple on your water supply line and after that fitting, to the point where you require chemical injection, the injection valve out with teflon and put in into the pipe. Unscrew the nut, put well the discharge tube (stiff Polyetilene) on the hose clamp of the nipple's valve, lock everything by closing the nut well.

Connect the other extremity to the delivery of the pump (upper part of the pump head), by repeating the instructions above. See fig. 9

**Purge:** connect another tube's extremity for the manual purge (2 mt PVC crystal) in the hose clamp situated on the pump head lower to the right, while the other extremity is to be put into the suction lift tank. See fig. 10

### INSTRUCTION FOR PRIMING

For the priming of the pump in case of high against pressure in the injection, turn the purge knob for a quarter or a half of round (see fig. 10) until the head pump is completely full. Screw down again the knob.

### ATTENTION!!

- If it is necessary to take the pump off the plant, it is important to put the white disk in again, so as to avoid any exit of the liquid contained in the pump head from dripping out. - During the installation ensure that the discharge tubing is fixed correctly to avoid that it does not rub against hard bodies. Avoid also use less bends both on discharge and suction tubing.**
- Connect the pump to the plant always through the injection valve (1/2"Gm) supplied with the installation kit.**
- Connect the soft PVC tubing only in suction (on the foot filter side), instead connect the PE tubing in delivery by verifying that the cut of the tubing is clean and that lateral crushing is not caused; it is advisable to utilise a cutter instead of scissors.**

### 2.6 Operation

The metering pump is activated by a Teflon diaphragm mounted on a piston enclosed into a electromagnet, which is fed by continuous current producing a square wave moving the piston thus, a pressure is produced in the pump body with an expulsion of liquid from the discharge valve. Once the electric impulse is over, the return of the piston is spring assisted thus producing the suction action to the initial position, with a recall of liquid through the suction valve. The material used for the construction of the pump makes it particularly suitable for aggressive liquids.

We suggest you in any case to use the compatibility tables or our technical department.

**3.0 MAINTENANCE****3.1 General maintenance comments**

**Regular maintenance is essential if the pump has to give good service over a long period.**

**The following advice should be strictly followed:**

**It is difficult to estimate the periods between maintenance operations, because of the pumps operating conditions and the chemicals employed. It is therefore the basic responsibility of the operator to check regularly the appearance and condition of the pump and to clean and service it according to his findings**

**3.2 Periodic maintenance**

**Liquid's level in the tank should be monitored regularly and the tank refilled a necessary to avoid the running dry of the pump. Wet parts of the pump, foot valve, suction/delivery valves and the head and diaphragm should be inspected and cleaned at least every 3 months. Where very aggressive chemicals are being dosed, (Sodium Hypo chlorite is particularly difficult) this period may need to be reduced and cleaning be carried out more frequently. If pumps are not used for long periods, scale, sediment and encrustation deposits can build up causing the pump to malfunction. We highly recommend careful maintenance of the valves by running them under clean water after long periods of non use. Alternatively, if the pump has not been used for long periods, before re-setting up the operations, we strongly recommend operating it for at least 30 minutes with the foot filter immersed in clean water to flush the pump.**

### 3.3 Basic maintenance procedures

Before doing any maintenance read with attention the technical and safety characteristic of the dosing chemicals and follow the next procedures:

1 Turn off the pump and immerse the foot filter and the injection tube in clean water. Turn on the pump to let the water go through the pump head. If there are some crystals to be cleaned follow the next procedures:

2 Immerse the foot filter and the injection tube into an adequate solution to remove the crystals (ex. Chloridric Acid for Sodium Hipochlorite crystals); let the pump work for some minute. Then repeat the action with water and connect the pump to the plant.

## ATTENTION!!!!!

**It's necessary to effectuate all the operations with gloves and glasses suitable for the product used then consult the supplier of the chemical product.**

### 3.4 Replacing worn parts

#### Fuse replacement.

Proceed as follows:

1. Put at minimum the knob of the piston regulation of the run (in the pump where it is present)
2. Unscrew the fixing screws of the box
3. Open the front and the back part of the box minding the spring of the knob where it is present.
4. Replace the fuse that is well visible.
5. Assemble all the parts paying attention that the piston regulation knob (where it is present) is at the minimum position and that the spring is in.

#### Valves cleaning HC797- HC897- HC899 - HC997- HC999

Proceed as follow:

1. With a little tool extract the valve cartridges from their seats
2. Pay attention not to loose the oring at the bottom of the cartridge
3. Clean the valve cartridge with clear water
4. For a complete cleaning it is possible to open the valve cartridge, be carefull with all the internal parts
5. Assemble again the valve cartridge following drawing fig. 13-14-15-16
6. Insert again the valves cartridges in their seats

#### Diaphragm and O-rings replacement

Proceed as follows:

1. Undo the 4 bolts with an hexagonal key.
2. Remove the pump head.
3. Remove the old O-ring from the head carefully using a small screw driver.
4. By hand, or with pliers if necessary unscrew the diaphragm, and replace with the new one. Hand tight only. Before screwing the diaphragm into place, add a small quantity of Loctite® 222 onto the thread.
5. Refit the dosing head, tightening the head bolts sequentially and carefully to ensure an even airtight seal. Caution do not over tighten. We also recommend adding a few drops of Loctite® 222 on to the thread of the screws that hold the head.

### 3.5 Commonly reported problems

#### THE PUMP DOES NOT FUNCTION AND THE GREEN LED IS NOT LIT.

##### Solutions

1. Check that the electrical connection is correctly made.
2. Check that the fuse has not blown
3. Replace the electronic circuit with a new one.

#### THE PUMP FUNCTION CORRECTLY BUT NO LIQUID IS INJECTED IN THE PLANT

##### Solutions

1. Check the product level in the tank.
2. Check the foot filter which could be closed.
3. Check the injection valve is not closed.
4. Effectuate a maintenance of the suction and delivery valves. Parts showing any chemical attack, should be replaced, with alternative materials if necessary.

#### CHEMICAL LEAKS FROM THE DOSING HEAD.

##### Solutions

1. Check that the hose clamps are correctly fitted and tightened. Caution do not overtighten these components as they can easily be broken or threads stripped.
2. Check that the head bolts are tight and that the O-ring is in its correct position. Replace any damaged or worn parts as necessary.
3. Parts showing any chemical attack, should be replaced, with alternative materials if necessary.

# ENGLISH

## Chemical Compatibility Table

**Dosing pumps are widely used for dosing chemical products. It is important to select the most suitable material for the liquid to be dosed. The CHEMICAL COMPATIBILITY TABLE is a precious aid to that end.**

**The following Table must be used as an indicative instrument. Modifications in the transported fluid composition or particular service conditions can reduce the resistance of the materials.**

Product	Formula	Ceram.	PVDF	PP	PVC	Hastel.	PTFE	FPM (Viton)	EPDM (Dutral)	NBR	PE
Acetic Acid, Max 75%	CH3COOH	2	1	1	1	1	1	3	1	3	1
Concentrated hydrochloric acid	HCl	1	1	1	1	1	1	1	3	3	1
Hydrofluoric acid 40%	H2F2	3	1	1	2	2	1	1	3	3	1
Phosphoric acid, 50%	H3PO4	1	1	1	1	1	1	1	1	3	1
Nitric acid, 65%	HNO3	1	1	2	3	1	1	1	3	3	2
Sulphuric acid 85%	H2SO4	1	1	1	1	1	1	1	3	3	1
Sulphuric acid 98.5%	H2SO4	1	1	3	3	1	1	1	3	3	3
Amines	R-NH2	1	2	1	3	1	1	3	2	3	1
Sodium bisulphite	NaHSO3	1	1	1	1	1	1	1	1	1	1
Sodium carbonate (Soda)	Na2CO3	2	1	1	1	1	1	2	1	1	1
Iron chloride	FeCl3	1	1	1	1	1	1	1	1	1	1
Calcium hydroxide	Ca(OH)2	1	1	1	1	1	1	1	1	1	1
Sodium hydroxide (Caustic soda)	NaOH	2	1	1	1	1	1	2	1	2	1
Calcium hypochlorite	Ca(OH)2	1	1	1	1	1	1	1	1	3	1
Sodium hypochlorite, 12.5%	NaOCl + NaCl	1	1	2	1	1	1	1	1	2	2
Potassium permanganate 10%	KMnO4	1	1	1	1	1	1	1	1	3	1

Aluminium sulphate	Al2(SO4)3	1	1	1	1	1	1	1	1	1	1
Copper sulphate	CuSO4	1	1	1	1	1	1	1	1	1	1

Component with excellent resistance -1-

Component with fair resistance -2-

Non-resistant component -3-

### Construction materials of pump and accessories

Polyvinylidene fluoride (PVDF) Pump body, valves, fittings, tubes  
Polypropylene (PP) Pump body, valves, fittings

PVC Pump body  
Hastelloy C-276 (Hastelloy) Injection valve spring  
Polytetrafluoroethylene (PTFE) Diaphragm  
Polyethylene (PE) Tubes

## Disclaimer

**The information included in these tables has been obtained from highly qualified sources which we deem reliable and they are provided without any guarantee, explicit or implicit, concerning their exactness.**

**Conditions or methods for handling, storage and use of the material are beyond our control and/or knowledge.**

**For this reason and for other reasons we will not be held liable thereof and we expressly waive obligations of claim for damages or relating to the information contained herein.**

## **WARRANTY CONDITIONS**

The pumps are warranted to be free from defects in workmanship and material for a period from the delivery date to the first purchaser.

Within the above stated period the producer will supply free of charge any part that upon examination by the producer or by an authorised dealer, is disclosed to have been defective in workmanship or material, or at its option, it will repair the parts directly or through authorised workshops. It remains anyway excluded from whatever responsibility and obligation for others costs, damages and direct or indirect losses that come from the use or the not use availability, either total or partial.

**The reparation or the supply in substitution will neither extend nor renew the period of guarantee.** They remain anyway at charge of the purchaser the costs of plant pumps mounting and disassembling, transport cost and using materials (filters, valves, and so on).

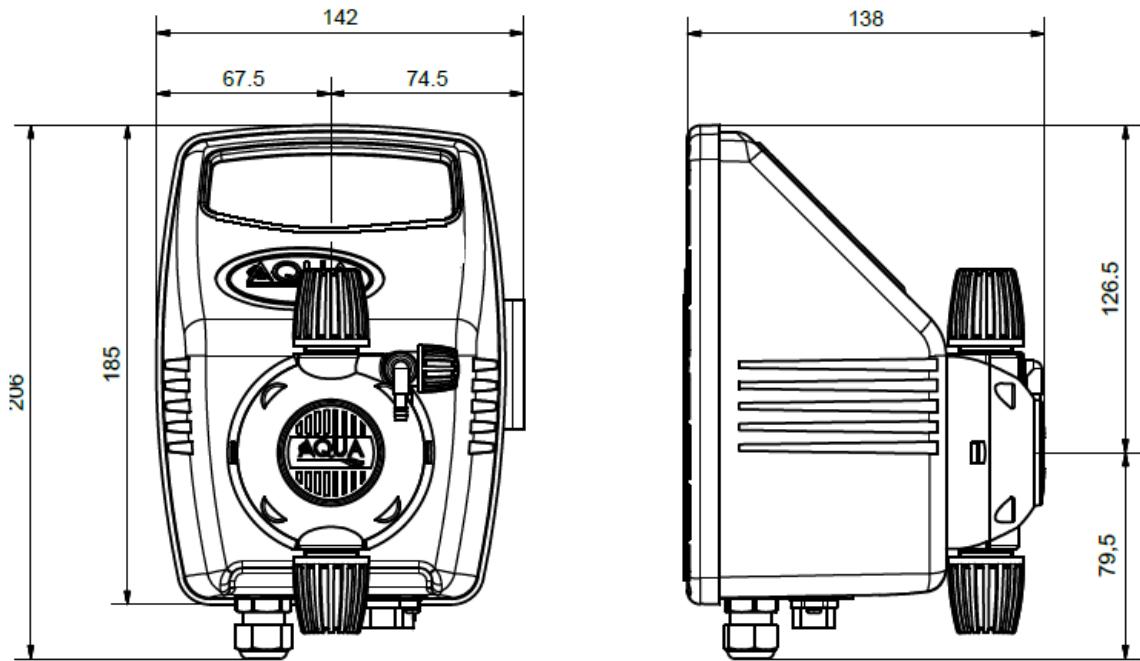

### **Producer's duties, as above, are not valid when:**

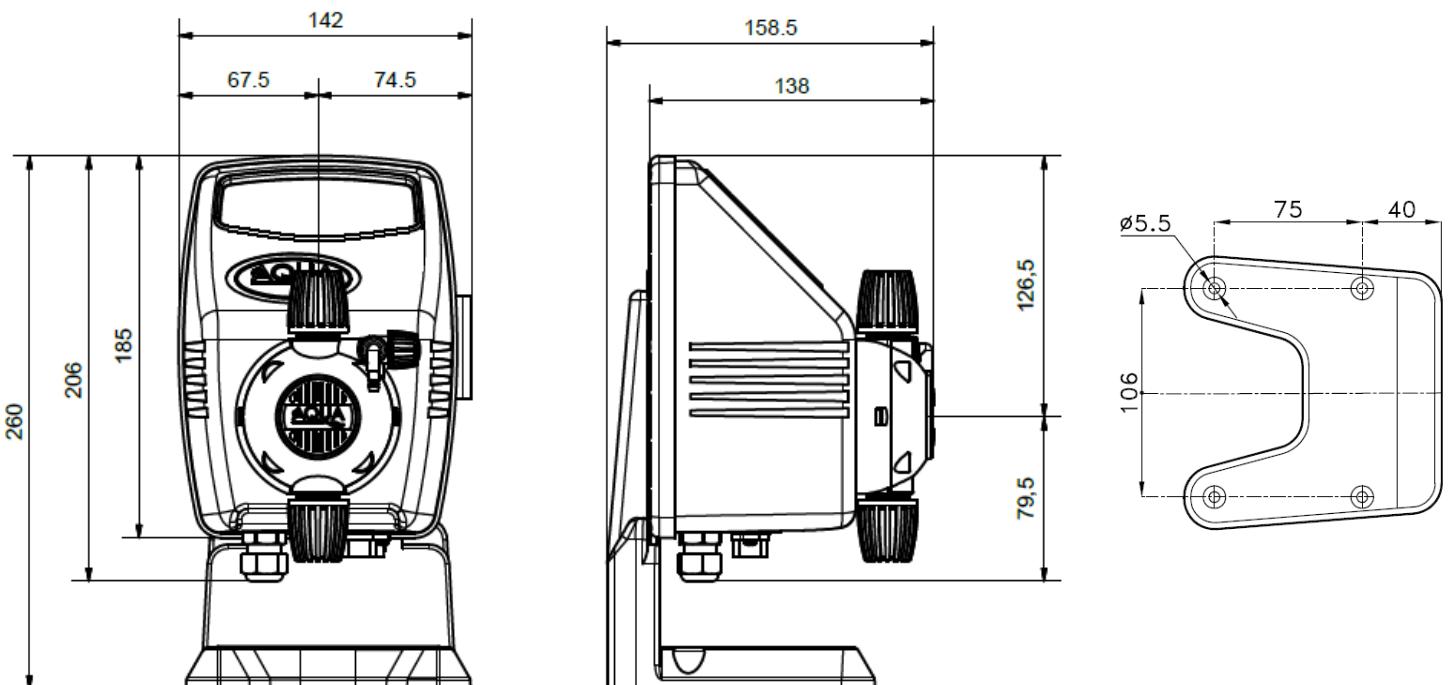

- ◆ **The pumps are not used according to the producer instructions as in the operating manual and maintenance instructions;**
- ◆ **The pumps are repaired, disassembled, modified by workshop not authorised;**
- ◆ **They have used not original spare parts**
- ◆ **The injection plans are damaged buy products that are not suitable;**
- ◆ **The electric plants have been damaged because of external causes such as whatever type of over tensions.**

**AT THE END OF THE WARRANTY PERIOD FROM THE DELIVERY DATE, THE PRODUCER WILL BE FREE FROM ANY LIABILITY AND FROM ALL THE DUTIES AS ABOVE!**

## Informazioni per la protezione ambientale

Ai sensi dell'art. 13 del DL n° 151 del 25/07/2005 (attuazione delle direttive 2011/65/EU , 2002/96/CE,2003/108/CE) si comunica che:  
I dispositivi elettrici ed elettronici non devono essere considerati rifiuti domestici.  
I consumatori sono obbligati dalla legge a restituire i dispositivi elettrici ed elettronici alla fine della loro vita utile a degli idonei centri di raccolta differenziata. Il simbolo del cassetto barrato riportato sul prodotto, sul manuale di istruzioni o sull'imballo indica che il prodotto è soggetto alle regole di smaltimento previste dalla normativa. Lo smaltimento abusivo del prodotto da parte dell'utente comporta l'applicazioni delle sanzioni amministrative previste dal DL n° 151 del 25/07/2005. Col riciclo, e re-utilizzo del materiale e altre forme di utilizzo di dispositivi obsoleti si può rendere un importante contributo alla protezione dell'ambiente.

## Note on environmental protection

After the implementation of the European Directive 2002/96/EU in the national legal system, the following applies:

Electrical and electronic devices may not be disposed of with domestic waste. Consumers are obliged by law to return electrical and electronic devices at the end of their service lives to the public collecting points set up for this purpose. Details to this are defined by the national law of the respective country. This symbol on the product, the instruction manual or the package indicates that the product is subject to these regulations. By recycling, reusing the material or other forms of utilising old devices, you are making an important contribution to protecting our environment.
